

Python and XML

Monday June 7, 2021

A friend shared this:

“Well, that can’t be right!”, I thought. So, I refuted it, thusly:

```
Testing the memory footprint of a large XML file load (50 MB) in Python.  
Result:  
  
Startup, memory usage is 12.27 MB  
Items loaded: 71400  
Finished parsing and loading XML data, memory usage is 77.65 MB
```

Details are here: <https://github.com/jfcarr/xml-load-memory-python>
